

Are you required to report in the e-Transport system?

Use the application made by the Ministry of Finance!

The operators required to report in the national e-Transport system must ensure **the positioning data of the transport vehicle**, which are the subject of the declaration, **throughout the duration of the goods transport route**.

The driver is required to turn on the positioning device before starting the transport on the national territory and to turn it off **only after** delivering the goods to the declared place of delivery on the national territory or after leaving the national territory.

Furthermore, at the request of the authorities, the driver of the transport vehicle must provide the documents accompanying the transport, together with the **UIT code**.

For helping drivers to comply with the obligations established by OUG 41/2022 regarding the transfer of the current positioning data of the transport vehicle in the RO e-Transport System, the Ministry of Finance uploaded on the Google Play (for Android) and App Store (for IOS) **the mobile application e-Transport**.

For the fleet owners equipped with their own GPS devices, technical information on receiving GPS data through fleet management applications is published on the website of the Ministry of Finance (www.mfinante.gov.ro/web/etransport/primire-date-gps).
